

Skin Compatibility Chart

It is important to ensure skin suitability prior to treatment. Skin Types 1 to 4 on the Fitzpatrick Classification Skin Tone scale are suitable whereas Skin Types 5 and 6 will have too much melanin in the skin and this could create an adverse reaction

The chart below indicates suitability

The Fitzpatrick Classification Scale

- **Type I** – Very white or freckled skin, always burns with sun exposure (very fair; often in people with red or blond hair and blue eyes)
- **Type II** – White skin, usually burns with sun exposure (fair; often in people with red or blond hair and blue, green, or hazel eyes)
- **Type III** – White or olive skin tone, sometime burns with sun exposure (fair; seen in people with any hair or eye color)
- **Type IV** – Brown skin, rarely burns with sun exposure (common in people of Mediterranean descent)
- **Type V** – Dark brown skin, very rarely burns with sun exposure (common in people of Middle-Eastern descent)
- **Type VI** – Black skin, never burns with sun exposure
